

Test Git Hub Document

Joel C. Swallow

July 6, 2016

Abstract

Here is some things about how to use git hub.

1 From Kristian's Linux Lesson No.2

1.1 Login Details

user: jcsallow email: j**480@***** password: *****

1.2 Begining

- Tell git to track a directory: `git init` (initializes git in that directory).
- `git status` - gives current status: verry usefull.
- In the directory we have a `.gitignore` file (.=invisible) in which we add all the file extensions (file types) we dont want to add.
- To add a file ready to comitt: `got add FileName`.
- to add everything: `git add *`
- NOTE: hard to undo after a comitt!
- To undo a git add for a file *FileName*: `git reset FileName`
- To undo a git add in general: `git reset`.

1.3 Versioning
